*Prices subject to change without notice

Ships in 2 business days

The bonus of an amplified phone WITH addition of the emergency connect feature. The Amplified Emergency Medical Connect Phone acts as an automatic dialer in emergency situations. It comes with 2 small transmitter remotes that can be worn on wrist like a watch, or attached to a lanyard around the neck (included).

In the event of an emergency, the wearer presses the red emergency button on the transmitter OR on the phone. Once the emergency button is pressed, the phone numbers of up to six programmed emergency contacts are dialed. These are normally family members, friends or neighbors who would be able to respond to the emergency call. If there is no response after 30 seconds or the line is busy, the phone automatically dials the next programmed number. It will cycle through numbers twice. When the phone reaches a live person, it will play your pre-recorded emergency message. The other person will dial a number (0-9) to confirm that the emergency message has been received and to deactivate the system from dialing the next emergency contact. The system then turns on its speakerphone so the other person is able to speak and listen to the other user, known as Remote Audio Monitoring.

This system also has a remote call feature that allows a caller to call the phone and after 10 rings enter a user password that will **remotely answer the phone in 2 way speakerphone mode**. This allows you to call and check on someone and speak to them through the speakerphone without them having to touch the phone. This is a great way to call and make sure they are ok without the person you were calling having to do anything to answer the phone, totally hands free. Easy to install and use - - phone uses standard phone line - - transmitter pendants are battery-powered, allows you to remain independent - - provides added security without monthly monitoring fees from security companies
